THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. **PROSECUTION ON THE MERITS IS CLOSED.** THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN **THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE** OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. **THIS STATUTORY PERIOD CANNOT BE EXTENDED.** SEE 35 U.S.C. 151. ## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

**IMPORTANT REMINDER:** Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

## **DETAILED ACTION**

### ***Reasons for Allowance***

1. The following is an examiner's statement of reasons for allowance:

For independent claims 1 and 10, the prior art fails to show alone or in combination a transmission system comprising a sending device, at least one relay device, and receiving device wherein the sending device converts the frames to be transmitted to a fixed length by adding null data to tail portions of the frames to make the frame length an integer multiple of a specified length if the length of the frames is not an integer multiple of the specified length, dividing the higher-layer protocol data into units of the specified length, and adding to each unit of specified length a specified number of bits of type information indicating the position of that unit within the higher-layer protocol data. The at least one stage of relay devices receives continuous blocks and idle blocks, discards these idle blocks and continuous blocks containing bit errors to extract only valid continuous blocks, and then inserts idle blocks between the valid continuous blocks to match the sending rate to the transmission rate of the transmission line on a transmission side and transmitting to a prescribed transfer destination.

The prior art of Boström et al. (U.S. Patent 6,504,840) teach a method, system and apparatus for transferring information between nodes comprising sending and receiving nodes that remove blocks containing error bits and inserting idle blocks to match the transmitting speed of the sending device with the receiving speed of the receiving device. However, Boström et al. fail to teach one or more relay devices that also remove blocks containing error bits and inserting idle blocks to match the receiving speed of the receiving device. Boström et al. also fails to teach a sending device that converts the frames to a fixed length by adding null data to tail

portions of the frames to make the frame length an integer multiple of a specified length if the length of the frames is not an integer multiple of the specified length, dividing the higher-layer protocol data into units of the specified length, and adding to each unit of specified length a specified number of bits of type information indicating the position of that unit within the higher-layer protocol data.

For independent claims 6 and 18, the prior art fails to show alone or in combination a transmission system comprising a sending device, at least one relay device, and receiving device wherein the sending device converts 8B/10B code to the blocks having a length of 133 bits by, for data code, fetching data portions of 8 bits, and for control code, representing control information by 4 bits and adding 4 bits of information indicating the position of the next control code, resulting in 8 bits, and, adding five bits of information indicating the position of the next control code to the header of every 16 codes. The at least one stage of relay devices receives continuous blocks and idle blocks, discards these idle blocks and continuous blocks containing bit errors to extract only valid continuous blocks, and then inserts idle blocks between the valid continuous blocks to match the sending rate to the transmission rate of the transmission line on a transmission side and transmitting to a prescribed transfer destination.

The prior art of Boström et al. (U.S. Patent 6,504,840) teach a method, system and apparatus for transferring information between nodes comprising sending and receiving nodes that remove blocks containing error bits and inserting idle blocks to match the transmitting speed of the sending device with the receiving speed of the receiving device. However, Boström et al. fail to teach one or more relay devices that also remove blocks containing error bits and inserting idle blocks to match the receiving speed of the receiving device. Boström et al. also fails to

teach a sending device that converts 8B/10B code to the blocks having a length of 133 bits by, for data code, fetching data portions of 8 bits, and for control code, representing control information by 4 bits and adding 4 bits of information indicating the position of the next control code, resulting in 8 bits, and, adding five bits of information indicating the position of the next control code to the header of every 16 codes.
